

Quick-Check Sustainability Strategy

Transparency as a starting point on the way
to a future-proof industrial company

Our experience shows that a holistic view of sustainability is like a focal point for the future success of the company. The perspective of 'managing sustainably' offers a starting point for a transformation that results in a future-proof company, equivalent to an improved competitive position,

economic growth and positive contributions to the environment and society. Even if necessity and value-add of sustainability seem to be clear, it is not easy to find the appropriate starting point for a company, as there are many open questions around.

Do you know these questions?

What strategic impact does sustainability have on our company?

Which requirements (from customers, investors, employees, society) should we meet?

What value-add does sustainability provide to our company?

How is our company positioned in terms of sustainability?

How do we link CO₂ reduction with our strategic goals?

How can we identify and prioritize actions?

Where should we start?

The *Quick-Check* sustainability strategy offers an instrument for creating transparency about these issues – without risks and excessive use of resources for your company!

Get a picture of the challenges and opportunities of sustainability for your company and identify approaches for integrating sustainability into corporate governance and processes – in line with your corporate goals. In this way, you create the basis for a future-proof company, with an improved competitive position, economic growth and positive contributions to the environment and society.

Validated analytical structure, up-to-date knowledge base & tailor-made results

With our *Quick-Check* sustainability strategy, you benefit from an up-to-date knowledge base, a validated structure and many years of experience.

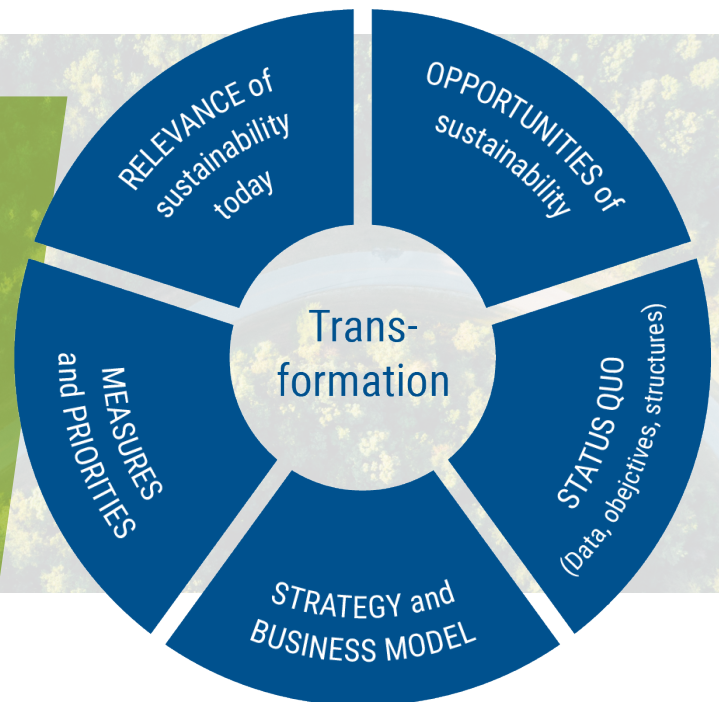

Yet, we define the specific approach together according to the questions and goals of your

company. This provides tailor-made results which you can use as basis for planning further steps – in addition, you develop trust and confidence in your ability to initiate a sustainable transformation process in a value-adding way!

Fields of analysis of the *Quick-Check*

The procedure of the *Quick-Check* follows your needs. Together, we prioritise fields of analysis, desired outcomes and depth of analysis.

Existing data, knowledge and structures within your company are also taken into account.

Specific result of the *Quick-Check*

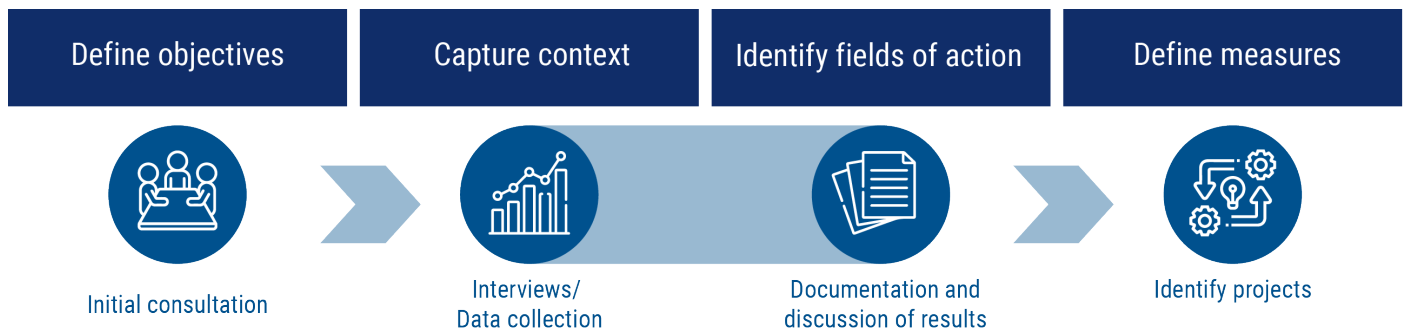

Starting point for the 'business case' of sustainability for your company

The *Quick-Check* sustainability strategy creates transparency towards your specific challenges. This provides you with:

- 1 Understanding of challenges and opportunities of sustainability for your company.
- 2 Understanding of the urgency of sustainability and knowledge about legal requirements.
- 3 Inspiration and an approach to integrate sustainability into management and business processes.
- 4 Trust and confidence to initiate a sustainable transformation process in a value-adding way.
- 5 Knowledge of specific opportunities and measures as well as success factors for your company.

Procedure of the *Quick-Check* Sustainability

In an **initial consultation**, we jointly determine based on your goals fields of analysis, discussion partners and format for the discussion of the results.

Afterwards, the **analysis** is carried out on the basis of our knowledge base, interviews and data provided by your company.

You will receive a **report**, which, in addition to

general analyses of your industry and regulatory requirements, contains the specific results for the defined fields of analysis.

In addition, the report highlights fields of action as well as potential starting points for measures in light of the **analysis results**. We discuss the report together in your desired format, e.g. during a short conversation or in an intensive workshop.

Get in touch and make your appointment for the free initial consultation!
